Degrees in Engineering and Industrial Technology, 1967-68.
Engineering Joint Council, New York, N.Y. Engineering Manpower Commission
Pub Date Nov 68
Note-36p.
Available from-Engineering Manpower Commission, 345 East 47th Street, New York, New York 10017 ($2.00).
EDRS Price MF-$0.25 HC Not Available from EDRS.
Descriptors-Associate Degrees, Bachelors Degrees, *Engineering Technicians, *Engineers, *Industrial Education, *Junior Colleges, *Technical Education

The number of associate and baccalaureate degrees in engineering and industrial technology awarded by 415 institutions is reported by institution and curriculum. In the academic year 1967-68, 16,920 2-year degrees in engineering technology and 1,560 in industrial technology were awarded. Also 842 bachelor's degrees in engineering technology, and 943 in industrial technology were awarded. The most popular curricula are electrical/mechanical, and civil engineering technology. All fields of engineering are represented, with noticeable patterns in the states reflecting different local industrial needs and different educational philosophies. (MC)

THE ENGINEERING MANPOWER COMMISSION OF ENGINEERS JOINT COUNCIL

The Engineering Manpower Commission was organized in 1951 as part of Engineers Joint Council to serve as a focus for national technological manpower problems.

The Commission's program is carried out through the collection, analysis, and publication of significant data on engineering manpower, as well as the development of programs and policies designed to acquaint the public with the importance of engineering to the national welfare.

The Engineering Manpower Commission is charged with the following responsibility:

> "To engage in studies and analyses of the supply, demand, and utilization of engineering and technical manpower; to make recommendations, conduct programs, and develop reports concerning these aspect of engineering and technical manpower; and to carry on such other programs in the field of manpower as may be authorized by the Board of Directors of EJC."

Facsimile of Survey Questionnaires	35

Acknowledgments

This survey was conducted under the general direction of John D. Alden. The detailed work of checking and following-up replies, tabulating data, and typing the tables and text of the report was done by Carol Iceland, Estelle McNamara, June Reinman, and Alice Monroe of the EJC staff.

The assistance of Dr. W. Leighton Collins and the American Society for Engineering Education in encouraging EMC to undertake this survey is gratefully acknowledged. Thanks must be extended anonymously to the deans, registrars, faculty members and other officials of the 415 schools that provided data for this report, plus many others who responded to our survey but had no degrees to report. Without the cooperation of these people, this survey could not have been conducted.

JOHN D. ALDEN

Introduction

This is the third survey of technology degrees conducted by the Engineering Manpower Commission of Engineers Joint Council. This year the survey was made simultaneously with that covering engineering degrees which was undertaken to provide statistics no longer available from the U.S. Office of Education in the customary form. Because of the rapidly changing picture in engineering and technological education, and the imbalance between the estimated needs for technical manpower and the prospective supply of graduate technicians, the Commission felt that educational statistics should be collected and published with a minimum of delay.

Method of Presentation

Data are tabulated by institution and curriculum, using the same curriculum groupings as in the engineering degree survey. Separate sections are provided for degrees at the associate and baccalaureate levels. Because technology curricula tend to be widely varied in nomenclature, it was left to each institution to decide how its own graduates were to be reported, and no attempt was made to edit or interpret the returns other than to reconcile obvious discrepancies in the figures reported.

It is probable that different schools varied in choosing between similar headings such as industrial engineering technology and industrial technology, in deciding whether specialized curricula should be listed as engineering or industrial in nature, and in judging whether a particular curriculum should be reported under a related heading or in the "Other Engineering Technology" category. This latter category does include many degrees awarded in the drafting and design curricula. The "Engineering, General" and "Engineering Sciences" categories are also believed to include many pre-engineering transfer students who may or may not have received an associate degree. A facsimile of the questionnaire form and in-

structions is printed at the end of this report. Any questions about the interpretation or content of curricula should be addressed directly to the institution concerned.

Coverage

Although questionnaires were sent to over 600 schools thought to be offering technology programs, many were eliminated from consideration because their curricula were of less than two years duration, or did not lead to an associate degree or equivalent. Degrees were reported by 415 schools, of whom 369 granted associate degrees only, 22 granted both associate and bachelor's degrees, and 24 awarded bachelor's degrees only.

All 44 schools on the 1967-68 ECPD accreditation list are included in this report. The remaining schools represent a wide variety of programs, and the fact that they report graduates in the same curriculum fields does not necessarily mean that the programs are equivalent. EMC is not in a position to evaluate the merits of any of these programs, and suggests that such questions be directed to the schools themselves.

Highlights of the Report

16,920 2-year degrees in engineering technology and 1,560 in industrial technology were awarded in the 1967-68 academic year by the schools that responded to this survey. In addition, there were 842 bachelor's degrees in engineering technology and 943 in industrial technology.

Schools having at least one engineering technology curriculum accredited by ECPD accounted for 31% of the degrees, although they are less than 11% of the total number of schools covered. Electrical and mechanical engineering technology are by far the most popular curricula, with civil engineering technology also well represented. It is of interest to note that a few graduates were even reported in such specialties as nuclear, petroleum, mining, and marine technology, testifying to the development of programs paralleling practically all fields of engineering. Schools vary in numbers of graduates from Wentworth Institute of Boston with 833 graduates down to several with only one. There are noticeable patterns in different states reflecting local industrial needs as well as different educational philosophies and approaches.

The figures on women and foreign students, although they cannot be regarded as complete, indicate that these groups are at present a negligible factor in the supply of technicians.

In general, the current state of technician education is so varied and so complex that conclusions should be drawn only after detailed study, which is beyond the scope of this survey. It is hoped that the data presented here will be found useful as a basis for further investigation, as well as serving the more limited function of providing information on the current supply of technical manpower.

Comparison with Previous Years

No consistent series of data from previous years exists on which to base real comparisons. The only reasonably comparable set of schools is those with at least one engineering technology curriculum accredited by ECPD. Even here the previous EMC surveys of 1965-66 and 1966-67 used entirely different formats and degrees had to be estimated by the schools because of the timing. In the case of the non-ECPD accredited institutions the main problems are the lack of a definitive list of schools offering technology programs, and the fact that our previous surveys included industrial technology curricula of one year or longer duration.

The results of the earlier EMC surveys were published in 1967 [1/] and will not be repeated here. Any effort to compare data from year to year should be approached with caution. The trend in graduates from ECPD-accredited programs is shown in Table 1 and shows that the 6,264 degrees awarded last year are up slightly from the 1966-67 estimated figure but still less than in the 1958-1961 period in spite of recent increases in the number of

1/ Trends in Engineering Technician Enrollments and Graduates, Engineering Manpower Commission of Engineers Joint Council, 345 East 47th Street, New York, N.Y. 10017, July 1967, $2.00 prepaid.

schools offering technician programs. Although 6 schools have been added to the list since the 1966-67 report, only 120 more graduates were reported.

Table 1

Engineering Technology Graduates Reported by Institutions
Having at Least One Curriculum Accredited by ECPD

YEAR	NO. OF SCHOOLS REPORTING	GRADUATES
1953-54	27	3,927
1954-55	27	4,365
1955-56	29	5,499
1956-57	NO SURVEY THIS YEAR	
1957-58	35	5,928
1958-59	35	6,478
1959-60	34	7,639
1960-61	33	6,284
1961-62	32	6,035
1962-63	32	5,489
1963-64	32	5,507
1964-65	33	5,695
1965-66	37	5,270
1966-67	38	6,144
1967-68	44	6,264

Table 2 shows the results of the three EMC surveys for all schools and indicates improved coverage from year to year. It should be repeated that these figures are not purported to be all technology degrees awarded in either of the years, as we have no way of knowing how many additional schools may have given technology degrees that were not reported to us. Note however that the addition of 29 more schools in 1967-68 resulted in an increase of only 475 associate degrees.

Name of Institution _____

Address _____

ZIP CODE: _____

Name and Title of Official Responsible for Accuracy of Data:

For the Registrar: _____

For the Dean of Engineering: _____

Instructions - IMPORTANT

1. To maintain continuity with statistics previously compiled by the U.S. Office of Education, information should be supplied or verified by the REGISTRAR.
2. Report degrees for all engineering and technology curricula given by the institution, including any in departments outside the engineering college. Questions regarding particular curricula should be resolved between the Registrar and the Dean of Engineering.
3. All post-graduate pre-doctoral degrees (such as Engineer etc.) should be reported as master's.
4. Report degrees for the entire academic year ending in June 1968 (or nearest comparable reporting period.)
5. The American Society for Engineering Education, with which we are cooperating, requests that a copy of the completed form be sent to the Dean of Engineering to facilitate maximum use of data. The original form should be sent to the Engineering Manpower Commission.
6. If it is necessary to estimate any of the data for this report, please identify such figures by an asterisk after each estimated number.
7. Since a major objective of this survey is the timely publication of data, your cooperation is reporting promptly and accurately is essential.
